Subject: Airbus cover letter
Position name: Assitant Business Analyst

Dear hiring manager,

I am writing today to showcase three ways in which I would be a valuable asset to Airbus in the role of assistant business analyst.

Firstly, my previous experience in sales enabled me to secure initial funding for a simulation software designed for Airbus' numerical continuity problematic.

Secondly, I have an academic & practical understanding of FPGA systems, having worked on such systems at the CERN's Large Hadron Collider. During this experience, I designed a GUI prototype intended to replace all TUI previously used for measurement systems - a major upgrade within the CERN!

Thirdly, I speak English and French fluently, making me a polyvalent asset in multi-lingual teams. My previous experiences in European professional environments enable me to collaborate effectively in a variety of environments.

The three reasons highlighted above lead me to consider the role of assistant business analyst at the very intersection of my experiences, education and passions. Begginig a career at Airbus.

Thank you for your consideration thus far,

Marius Peter
